Aespire[®] View

Clarity of view...clarity of decision

Advanced anesthesia delivery in a compact system

You told us you have many different types of patients undergoing different procedures ranging from routine surgery to those with complex trauma. That you need a compact, integrated anesthesia delivery system that helps you deliver attentive care. Finally, you said you need a well-designed, user-friendly system that lets you focus on your patients, not on the equipment.

Working closely with you and listening to what really impacts your practice, GE Healthcare developed the Aespire View anesthesia delivery system.

A cost effective solution for hospital operating rooms and standalone surgery centers, the Aespire View demonstrates how GE's advanced technology leadership is helping drive the future of perioperative care.

Designed for the way you work

Clarity of view

Large 12-inch color ventilator display with color waveform and alarm message indicators along with familiar user interface helps you precisely assess and quickly respond to changes in your patient's status.

Helps manage costs

Total fresh gas or total flow sensing (TFS) module (optional) electronically measures, displays, and exports both individual gas flow and total fresh gas flow delivered by the flow tubes. The additional precision afforded by the electronic measurement helps in managing costs.

	MV l/min	RR /min
	6.1 10.5 0.5	16
Circle	Fresh Gas Flow l/min	
More Settings	O2 3.2	6.1
	Air 2.9	Total
	N2O 0.00	

Up and running at a moment's notice

The Aespire View fast and easy power up helps you waste less time waiting for your equipment.

Precision flow technology you can count on

Manage your patient's gas delivery with the Aespire View's consistent pneumatic gas flow mixing, individual flow controls, and dual-flow tubes. A minimum O₂ flow of 50 mL/min helps ensure accuracy in low-flow situations, and an auxiliary common gas outlet facilitates low-pressure leak testing.

Physical integration helps reduce the need for separate equipment

The Aespire View offers an integrated standard AGCO and optional integrated features including auxiliary O₂, suction control, CO₂ bypass and multiple monitor integration kits.

Keep your OR organized and clutter-free

As OR space can be tight, we designed the Aespire View to be lightweight, compact, and easy to move around. Aespire's sleek, contemporary design is complemented by smooth, durable, easy-to-clean surfaces.

You'll appreciate some of the features GE has engineered into the system:

- Advanced cable management arm (optional)
- Extra large work surface area
- Bi-level illumination
- Two roomy storage drawers with optional removable inserts for small items.

More ventilation choices means more tailored care

With five ventilation packages, including GE's innovative Pressure Controlled Ventilation-Volume Guaranteed (PCV-VG) technology, the Aespire View lets you tailor ventilation for each patient.

Ventilation modes are available à la Carte, so you can tailor the clinical capabilities of your anesthesia delivery system with the options you need.

Volume Control Ventilation delivers the tidal volume you set, regardless of changes in the fresh gas flow and airway pressure, up to the selected pressure limit.

Pressure Control Ventilation delivers the maximum tidal volume for the desired time and pressure selected.

Synchronized Intermittent Mandatory Ventilation (SIMV) and Pressure Supported Ventilation (PSVPro™) simplify the care of your spontaneously breathing patients. Both modes offer an adjustable flow trigger, trigger window, electronic PEEP, and an apnea backup is available with PSVPro.

Pressure Controlled Ventilation – Volume Guaranteed (PCV-VG) gives you the best of both worlds: the benefits of pressure controlled ventilation and a consistent tidal volume.

Five à la Carte ventilation packages:

- Volume Control
 - Pressure Control
 - Pressure Controlled Ventilation – Volume Guaranteed (PCV-VG)
- For the spontaneous breathing patient:
- PSVPro
 - SIMV with PSV & SIMV with PC

Precise gas delivery

GE has built its Advanced Breathing System (ABS™) into the Aespire View. By providing a system well-suited for low and minimal flow anesthesia, the ABS may reduce patients' agent consumption. Integrated electronics detect when the ABS is completely engaged or disengaged.

- With its small breathing system volume, the ABS responds to fresh gas changes rapidly even during low flow anesthesia
- Fewer parts to help prevent unwanted disconnects and leaks
- Bag-to-vent switch works without electronics – in case of power failure
- Autoclavable and latex-free surfaces
- Optional EZChange and condenser
- Electronic detection of “absorber off” and optional CO₂ bypass

A way to help provide cost effective care

The Aespire View helps keep affordability in reach with:

- Only one scheduled maintenance check per year
- Tec 7 vaporizers are planned factory service free
- Support for minimal and low-flow anesthesia

Exceptional support sets us apart

GE Healthcare is deeply committed to supporting you long after the point of purchase. Our world class service teams offer you flexible solutions to help ensure that your equipment performs at exceptional standards throughout its lifecycle. Together, we're focused on helping to making sure your investment will serve your long-term requirements.

Innovation that delivers.

Only GE has a 130-year history of technical innovation through engineering excellence, and a trusted brand name that reflects a commitment to our customers. Our exceptional track record in Life Systems Services demonstrates our promise: "We innovate to help transform the anesthesia experience."

Healthcare Re-imagined

GE is dedicated to helping you transform healthcare delivery by driving critical breakthroughs in biology and technology. Our expertise in medical imaging and information technologies, medical diagnostics, patient monitoring systems, drug discovery, and biopharmaceutical manufacturing technologies is enabling healthcare professionals around the world to discover new ways to predict, diagnose and treat disease earlier. We call this model of care “Early Health.” The goal: to help clinicians detect disease earlier, access more information and intervene earlier with more targeted treatments, so they can help their patients live their lives to the fullest. Re-think, Re-discover, Re-invent, Re-imagine.
